Rick,

Sorry for delay in reply -- I **Ex. 6 - Personal Privacy**

Ethylene glycol is one of 17 compounds that verbals were requested. So if hits were detected -- then we would like verbals -- a 7 day time for those. Send preliminary results to Robin Costas and Cindy Caporale -- who consolidated the results for the 17 compounds. This can be a very brief -- EXAMPLE: All results were <20 ug/L.

The final report is necessary before any action from EPA-- so the 21 day for final results. Just FYI - the Holding Time for Glycol analysis in the QA Sampling Plan is 7 days -- and the data validators will qualify data if the samples are not analyzed within that time.

Stevie

Stevie,

How soon is analysis needed? I know final reporting time is 21 days but I don't remember how many days before we need to analyze the samples and get out preliminary results.
